Real-time cart data and analytics

METRIQ's real-time cart location, access and utilization data help you track down drifted carts, understand usage patterns, redeploy carts for optimal utilization and right-size your fleet. A predictive battery life algorithm, easy access to warranty data and other tracking features help you plan and budget accurately.

Microsoft Active Directory integration

METRIQ uses your existing Active Directory structure to manage access levels, assign roles and distinguish application users from cart users. Authenticate users with your existing single sign-on (and without additional passwords to remember and manage).

Seamless service ticketing integration

Use out-of-the-box with your ServiceNow ticketing and with GCX tech support. Cart users can initiate detailed service requests with the touch of a button; IT staff can quickly escalate service requests to GCX when needed. Automate maintenance scheduling and reminders to maximize cart life and performance.

Fleet data API

Extend the value of your cart fleet data by integrating METRIQ with asset management, preventative maintenance/CMMS, healthcare facilities management (HFM) and other mission critical systems.

Cloud-based convenience and security

With METRIQ there's no software to install on client devices—just log in from any browser to access your fleet data. Keep fleet management and EHR separate for streamlined HIPAA compliance. And protect your data with Amazon Web Services KMS, API Gateway, GuardDuty and CloudWatch.
