GCX Healthcare Solutions

Medical Device Manufacturing Services

Bring custom, compliant, high-quality device mounting solutions to market—fast—with help from GCX

Choose your path

GCX offers three proven ways to build your custom mounting solution

01 | Off-the-Shelf

Build a custom solution from our off-the-shelf parts. Accelerate your time to market! Choose among hundreds of ready-made components—fixed and variable height wall arms, counter mounts, ceiling mounts, post/pole/rail mounts, mobile workstations, roll stands, tablet mounts and clinical accessories. GCX experts guide you every step of the way.

Wall arms

Rail mounts / Countertop mounts

M+ Series™ pivot arm

Carts

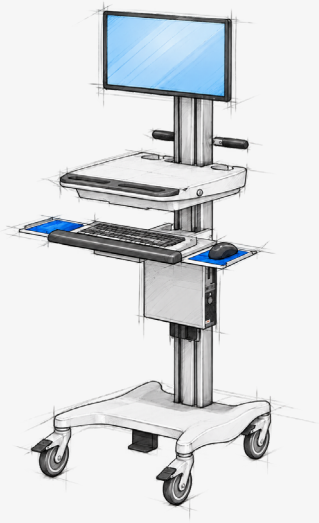

VHM-T Variable height arm for tablets

Tablet Roll Stands and Light Duty Roll Stands

02 | Configure

Mix our parts with custom components we build for you. Start with a best-selling GCX mounting solution; then add custom-manufactured parts or subassemblies to meet your clinical device and workflow requirements.

03 | Custom-build

Work with GCX to design and manufacture a fully customized solution. Our designers, engineers and manufacturing experts support you every step of the way—from an initial design concept through prototyping, testing, regulatory compliance, supply chain management, final assembly and logistics.

Work with the unmatched leaders in medical device mounting

Nobody has manufactured more medical device and healthcare IT mounting solutions than GCX.

55
years in business (founded in 1971)

1.4M+
arms and wall mounts deployed since 2020

1.2M+
carts and roll stands deployed since 2020

2.9M+
clinical accessories deployed since 2020

21
arm and wall mount product lines

19
cart and roll stand product lines

Complete, comprehensive product development, manufacturing and fulfillment services

GCX is so much more than a contract manufacturer. We offer medical device OEMs best-in-class capabilities across the entire product lifecycle. And our deep expertise helps keep your project on budget and on schedule.

Product concept and design

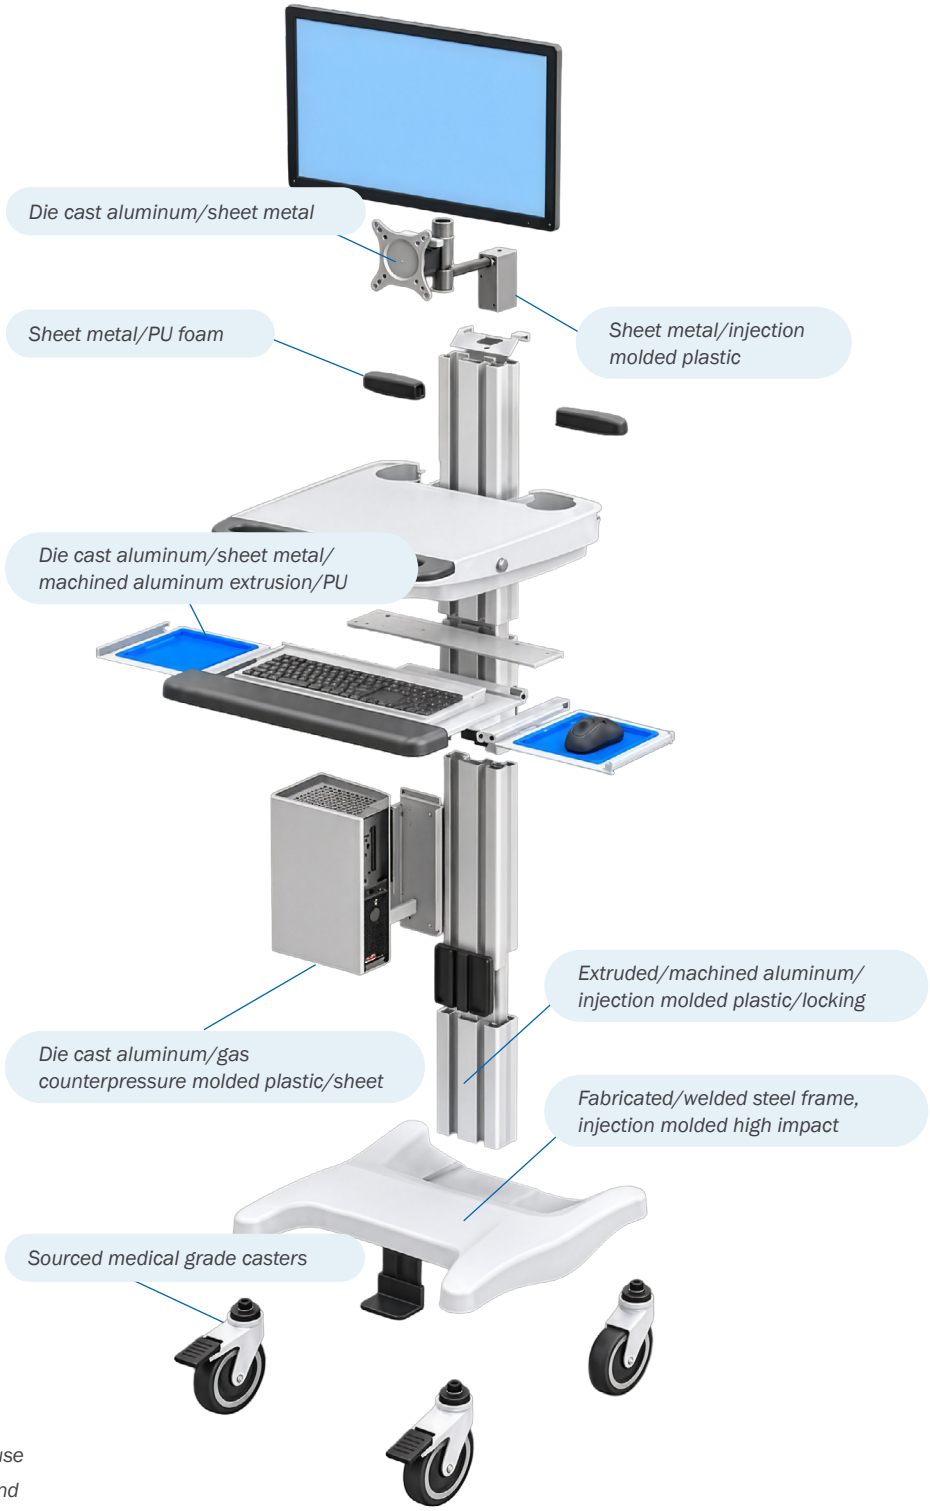

GCX has decades of experience ideating, developing and manufacturing custom solutions for medical device OEMs. Following design for manufacturing (DFM) best practices, we optimize for efficiency and profitability from the earliest stages of development.

Prototyping and testing

We have in-house capability and proficiency in most rapid prototyping technologies, including 3d printing and additive manufacturing, CNC machining, injection molding, vacuum casting and sheet metal fabrication. We can deliver your initial prototype in just days and iterate rapidly based on customer and stakeholder feedback.

Quality management

The GCX quality management system (QMS) is ISO 13485:2016 certified and represents decades of commitment to patient and clinician safety and an exceptional customer experience. Many medical device manufacturers choose us specifically for our track record of product reliability and durability.

Get prototypes and finished products built faster. GCX has in-house capability and proficiency in a wide variety of rapid prototyping and manufacturing technologies, as well as decades-long relationships with trusted component manufacturers.

Regulatory compliance

Our proactive regulatory guidance helps you evaluate compliance risk when weighing design options, avoid unnecessary regulatory filings and provide audit-ready documentation. In-house IEC 60601 testing capabilities and ISO 14971 risk management enable early identification of electrical and mechanical risks and cost-saving, evidence-based design decisions.

Software development

Our IT team can tailor our existing asset tracking and tablet management software to your solution, or develop new software to meet your requirements.

Manufacturing and logistics

GCX's global footprint—with locations in the United States, Europe and Asia—enables us to optimize your supply chain and inventory management, locate inventory closer to your customers, reduce your shipping costs and provide local customer support and service.

Custom mounting solutions at your speed. Build your solution from 100% custom components (fast), custom and off-the-shelf components (faster) or 100% off-the-shelf components (fastest).

Build custom mounting solutions for any clinical application

- Patient monitoring
- Fetal monitoring
- Surgical tools and robotics
- Surgical navigation
- Stroke care
- Kidney stone ablation
- Laryngoscopy
- Orthopedic care
- Angiography
- Circulatory support
- Bedside mounting
- Mobile/wireless/tablet mounting
- Anesthesia
- Augmented reality
- Patient experience
- Telemedicine
- Phlebotomy/blood draw
- Vascular access
- Patient check-in/registration
